## **ADC and JSAT Join Forces to Improve Criminal Justice Systems**

Two of the nation's leading providers of evidence-based tools and services for criminal justice systems strengthen their capabilities through a strategic partnership designed to expand and improve their assistance to clients.

**SALT LAKE CITY, UT** — Assessments.com (ADC) and Justice System Assessment and Training (JSAT) have formed a strategic partnership to combine products and services, staff, and collective experience and expertise, and to integrate the two companies' operational systems of administration, implementation, and support. Both companies have extensive experience working closely with criminal justice agencies to deliver sophisticated tools, training, consulting and software applications that are designed to improve efficacy and outcomes. Together, ADC and JSAT have a combined 30 years of experience working to improve criminal justice systems in multiple countries and jurisdictions of all sizes.

"This partnership strengthens services to all of our current and potential clients," said Sean Hosman, ADC President. "ADC and JSAT have always shared similar values and visions of quality and personal service, and this partnership allows both companies to maintain those principles while expanding the portfolio of products and services we can offer our clients."

According to JSAT's Bradford Bogue, "Our partnership with ADC represents the coming together of two experienced and respected companies in the industry. We will continue to provide the highest quality of service to our clients, only with a greater ability to draw upon the combined expertise and resources for which ADC and JSAT are well known."

Started in 1998 in Washington State, ADC has worked with over 100 adult and juvenile criminal justice agencies and private providers across the U.S., implementing a full continuum of Evidence-Based Practices. ADC solutions have included: validated assessments, triage protocols, assessment-driven case planning, staff skill development (such as Motivational Interviewing and cognitive-behavioral training), organizational development, and re-engineering of processes and policies for quality assurance and sustainability. ADC's smart technology and time-tested software applications add additional value by increasing efficiencies, enhancing effectiveness, and saving taxpayers' dollars through automated processes that simplify information-sharing, coordination of services and reporting on outcomes and ultimate performance measures.

JSAT is an international consulting firm that brings Evidence-Based Practices (EBP) and performance measurement strategies to federal, state, and local correction agencies through system evaluation, training and assessment, and tool development services. JSAT works with each customer to develop instruments and practices that provide the optimum fit for their ongoing needs and cultures. Since 1997, they have guided agencies in multiple countries and 35 states into strategies and technology geared toward obtaining greater accountability and lower recidivism rates.

Both ADC and JSAT principals, management, and staff will continue to serve their combined existing clients, as well as new customers. Clients can expect seamless, and yet more efficient and responsive, operations and management. The new partnership will allow the firms to work as integrated entities, offering and delivering their respective products and services. The partnership will maintain offices in Salt Lake City, Utah and Boulder, Colorado.

"We remain committed to providing superior resources and capabilities for our clients," said Sean Hosman. "These two companies, by working together, hope to become even more effective at improving the way criminal justice systems work."
